SUMMARY

Senior UX/Front-End Designer specializing in AI-enabled SaaS platforms, complex workflow-driven products, and design systems architecture. Sits seamlessly at the intersection of user experience design and front-end code (React, TypeScript, Tailwind CSS), taking products from user research and wireframes to production-ready components. Proven track record of spearheading AI-native UX initiatives, building automated internal tools, leading design teams, and driving cross-functional collaboration across engineering, product, and data science teams.

TECHNICAL SKILLS & EXPERTISE

- **Design & Prototyping:** Figma (Advanced Variables, Tokens & Prototyping), Adobe Creative Suite (Photoshop, Illustrator), Information Architecture, Persona Development, Usability Testing.
- **Front-End Engineering:** React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Chakra UI, Material UI, Component-Based Architectures, REST APIs, Git/GitHub.
- **AI-Native UX & Methodologies:** Conversational UI Patterns, Human-AI Collaboration Frameworks, LLM Integration Workflows, Custom Claude Plugin Development, Agile/Scrum Methodologies.
- **Standards & Systems:** Design Systems Architecture, WCAG Accessibility Compliance, Responsive Cross-Platform Design, Cross-Functional Leadership.

WORK EXPERIENCE

Quantum Workplace | Product Designer II *(Current Role)*

May 2026 - Present

A leading employee success and analytics SaaS platform empowering organizational culture and performance.

- **AI-Native UX Leadership & Architecture**: Collaborated on product-wide design and interaction initiatives for “Cue”, Quantum Workplace’s internal AI chat and feature suite. Kicked off initial research and co-designed/coded the standardized interaction framework (trigger language, conversational patterns, model transparency, and color usage) adopted across multiple platform features.
- **Hybrid Design & Front-End Engineering**: Actively execute the "blurry" boundary between UX and code by building responsive, accessible, and reusable components in React/TypeScript to prototype and validate complex workflows before production handoff.
- **AI Workflow Innovation**: Engineered an innovative custom Claude plugin designed specifically to integrate with the Product and Development teams. Automates pre-review critiques of designs against usability, accessibility, and system-consistency standards, pressure-testing concepts to accelerate team velocity and design feedback loops.
- **Cross-Functional Collaboration**: Partner closely with product managers, data scientists, and engineers to translate complex analytics and feedback data into clear, user-centric, and high-impact UI components.

SITE Technologies | UI/UX Lead Designer

Jun 2024 - Jan 2026

An AI/ML-enabled platform streamlining property management.

- **Design Leadership & Management:** Co-led a cross-functional team of 3 designers in an agile environment. Acted as the final design authority, scoping design quality, establishing best practices, and mentoring junior team members to maintain a high-bar user experience across all product touchpoints.
- **Core Platform Redesign:** Spearheaded the complete redesign of the core SaaS platform, transforming it into a modern, high-performance interface. Managed end-to-end design from user personas and information architecture to high-fidelity interactive prototypes.
- **AI-Augmented Research & Strategy:** Leveraged AI-powered tools (such as Google NotebookLM) to synthesize large volumes of stakeholder transcripts, user interviews, and competitive data, ensuring 100% alignment between design execution and strategic business goals.
- **Systems Architecture & Handoff:** Standardized cross-departmental handoff documentation using Figma variables and advanced interactive prototyping, dramatically minimizing engineering friction and speeding up delivery cycles.

OneStaff Medical | Software Developer - UI/UX Designer

Jan 2022 - Jun 2024

A healthcare staffing and recruiting enterprise scaling national operations.

- **Design System Architecture:** Architected the company's inaugural Design System in Figma from scratch, establishing a single source of truth for UI components and streamlining design-to-development pipelines.
- **Full-Stack UI Execution:** Bridged design and engineering by translating complex stakeholder feedback into scalable, production-quality front-end solutions using React, Material UI, and Contentful Headless CMS.
- **Executive Alignment & Strategy:** Partnered directly with executive stakeholders to align design roadmaps with long-term business objectives, ensuring UX initiatives directly drove operational growth and efficiency.
- **Validation & Testing:** Conducted rigorous user research, usability testing, and UAT (User Acceptance Testing) to iteratively refine interface performance and user engagement.

EDUCATION

Arizona State University | BA, Graphic Information Technology

Aug 2018 - May 2021
